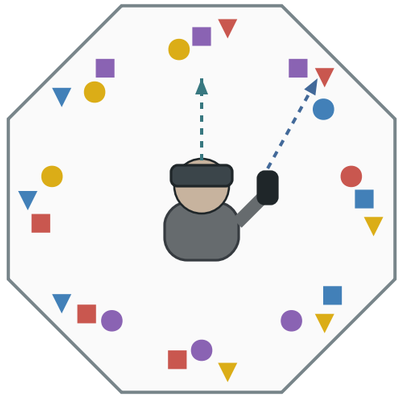
(a) Sensing



Seated participant

Multiple objects on eight planes

Target identity hidden from participant

Eye gaze + validity

Head pose + right-controller hits

(b) Local state and memory

Guidance state

Geometry, gaze freshness and object hits

Turning / refining / acquiring / selecting

Qualified actions and candidate eligibility

observed transitions

Recent context

Spatial: turn progress and target-return history

Speech: actual playback + state transitions

Speech window: 15 s; up to 4 events per list

Reset with guidance; no long-term user memory

(c) MiniLM decision

snapshot

MiniLM

Input: state + recent history

Offered strategies and phrases

Decision: strategy + wording

Local model request (lab computer)

Qualified local feedback

(d) Speech output

Recheck + schedule

Current state / validity / pacing

Drop stale or conflicting cues

Prepared voice audio

Neutral or self-similar voice

Actual playback is recorded

Actual playback and its outcome

Recorded observations I guidance state I model decisions I playback events -> trial viewer and offline evaluation
