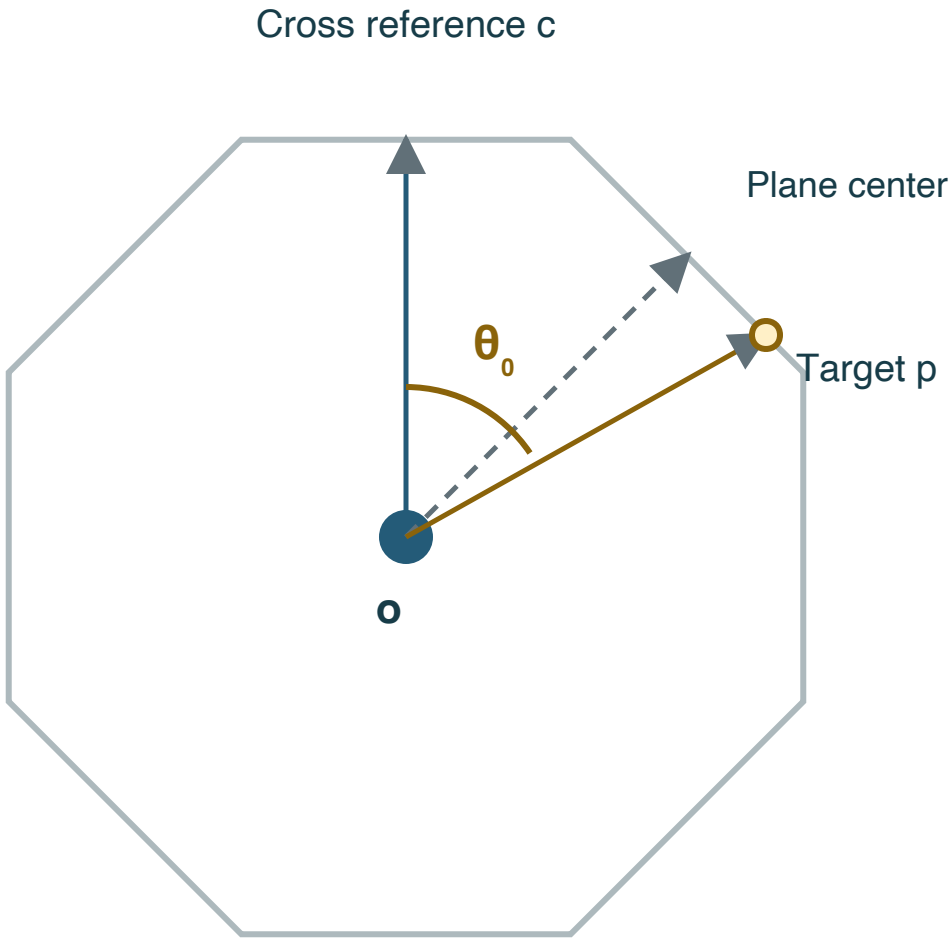
Allocation category and exact starting bearing

Conceptual overhead geometry; the target is placed on its object plane to realize the assigned angle.



Allocation category

0°, 45°, 90°, 135°, or 180°
Eight trials per category per block
Four left / four right when bilateral

Exact starting bearing

Saved origin □ cross versus target
Horizontal projection; signed angle
Saved at readiness, before the cue

An octagon and target are schematic; this is not a recorded layout.
