

Current Report Citations

Sources currently cited by the IRB draft and experiment procedure

Source documents checked: **docs/irb/project/irb-documentation-draft.tex** and **docs/experiment-procedure.md**. The older project proposal was not used because its external references.bib file is missing and several descriptions are superseded by the current procedure.

This folder contains four full papers and one clearly labeled citation/summary for a restricted IEEE VR paper. Filenames use year, first author, and a recognizable short title.

Year	Citation	Local status	Role in current report
1988	Hart & Staveland Development of NASA-TLX	Full PDF	Subjective workload measure
2023	Zhang et al. See or Hear? Audio and visual guidance for AR search	Full PDF	Search procedure, guidance modality, NASA-TLX
2024	Chiossi et al. Searching Across Realities	Full PDF	Visual-search procedure, eye tracking, ERP, NASA-TLX
2024	Guo et al. Self-similar appearance and voice	Full PDF	2 x 2 voice design, voice capture, post-condition surveys
2026	Kaschub et al. Referential interaction with a VR intelligent assistant	Citation/summary	Gaze as low-effort assistant context; workload and UX

Important distinction

NASA-TLX is the cited subjective workload instrument. Chiossi and Zhang support its placement in related XR search procedures, while Guo supports the self-similar voice manipulation. Kaschub supports gaze as an assistant reference channel. None independently validates this project's exact timing or gaze thresholds.
